1 What Tutti does

Tutti does three things, without going through a website:

- it **merges** several files into one PDF, in the order you choose, with **one bookmark per part** — designed for sheet music: full score and separate parts;
- it **converts to PDF** images (photos, scans) and Word, Excel and PowerPoint documents;
- it **splits** a PDF into one file per page, or by page ranges.

Your documents stay on your computer: nothing is sent over the Internet.

Your files are safe

- The original files are **never modified**: Tutti reads them and only writes the new PDF.
- Pages are copied **as they are**, with no loss of quality and no "re-printing".
- Tutti refuses to write over one of the files being merged.
- A power cut during the merge never leaves a half-written PDF behind.

2 Installing Tutti

Download the latest version from the project's **Releases** page, picking the file for your system:

Windows	`Tutti-Setup-X.Y.Z.exe`
macOS (Apple M1, M2… chips)	`Tutti-X.Y.Z-macos-arm64.dmg`
macOS (Intel processor)	`Tutti-X.Y.Z-macos-x86_64.dmg`
Linux	`Tutti-X.Y.Z-linux-x86_64.tar.gz` (or `-arm64`)

No administrator password is needed: Tutti installs into your own user profile.

Windows

Run `Tutti-Setup-X.Y.Z.exe`. On the very first launch Windows may show "Windows protected your PC", because the installer is not signed: click **More info**, then **Run anyway**. This warning appears only once.

macOS

Open the `.dmg` file and drag Tutti into **Applications**. On the first launch macOS refuses to open an unsigned application: **right-click** Tutti, choose **Open**, and confirm.

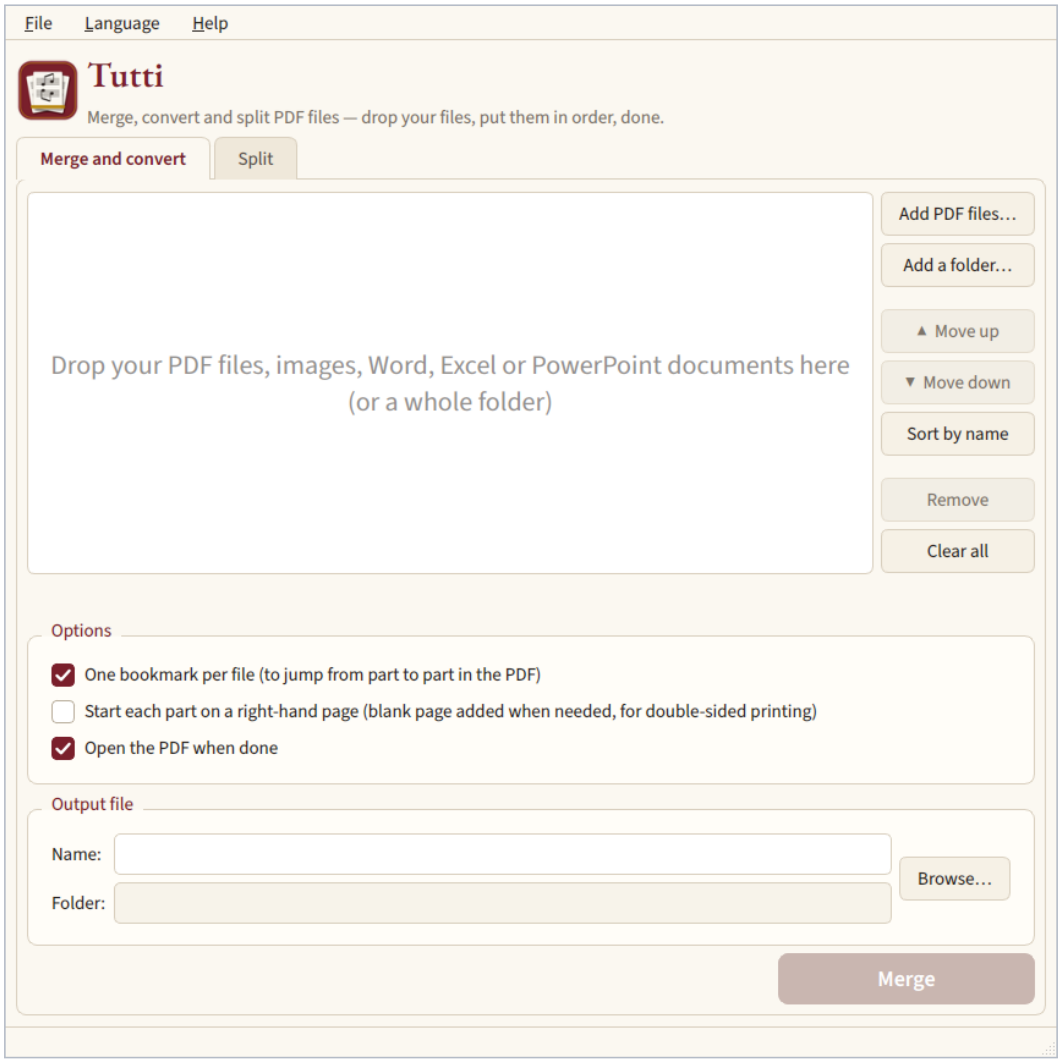

Linux

Unpack the archive and run `installer.sh`. Tutti installs into `~/.local/share` and appears in the applications menu.

3 First launch

Tutti opens in your system's language, French or English. The **Language** menu lets you force either one.

You are asked once whether to **send a report automatically if Tutti runs into a problem**. The report contains the program and system versions and the error; your file names and user name are hidden. You can change your mind at any time in the **Help** menu.

4 Merging PDF files, step by step

4.1 Adding the files

- **Drag** the PDF files from Explorer (or the Finder) into the large list;
- or drag **a whole folder**: every PDF it contains is added, sorted by name;
- or use **Add PDF files...** (Ctrl+O) and **Add a folder...**.

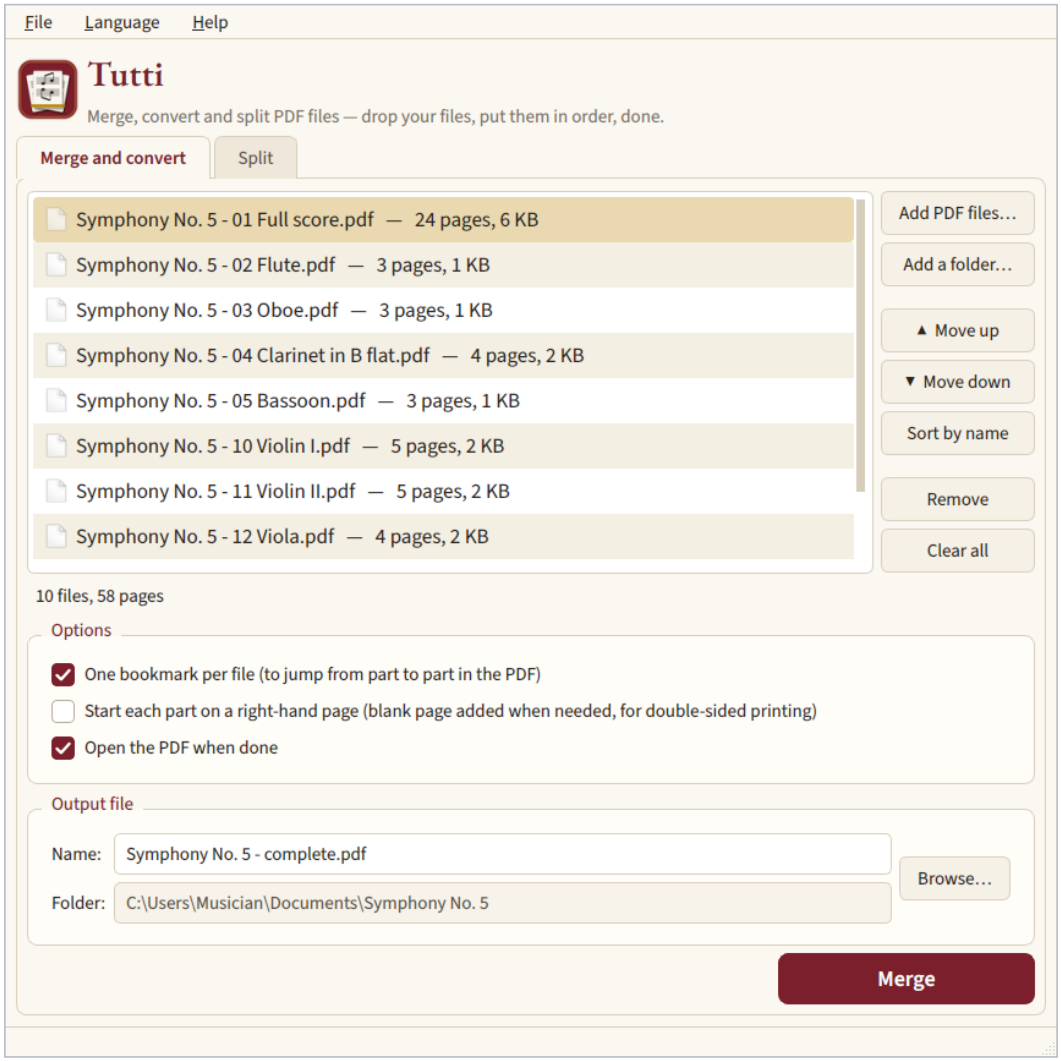

Each file shows its page count and size. A file already in the list is not added twice.

4.2 Putting them in order

The order of the list is the order of the merged PDF.

- **Drag** a file up or down inside the list;
- or select it and use **▲ Move up** / **▼ Move down** (Alt+↑ / Alt+↓);
- or click **Sort by name**. The order is "natural": `2 Flute` comes before `10 Violin`, as you would expect.

Remove (Del) takes the selected files out of the list; **Clear all** empties it. **No file is deleted from the disk.**

4.3 Checking the output file name

Tutti suggests a name based on what the file names have in common: `Symphony No. 5 - 01 Full score`, `Symphony No. 5 - 02 Flute...` give `Symphony No. 5 - complete.pdf`, in the folder of the first file. You can edit it directly, or pick another location with **Browse...**.

4.4 Merging

Click **Merge**. A bar shows the progress; the button turns into **Cancel** while working. When done, the PDF opens (option **Open the PDF when done**).

Good to know

If the output file already exists, Tutti asks whether to replace it. If it is open in a PDF reader, close it first: Windows does not allow replacing an open file.

5 Options

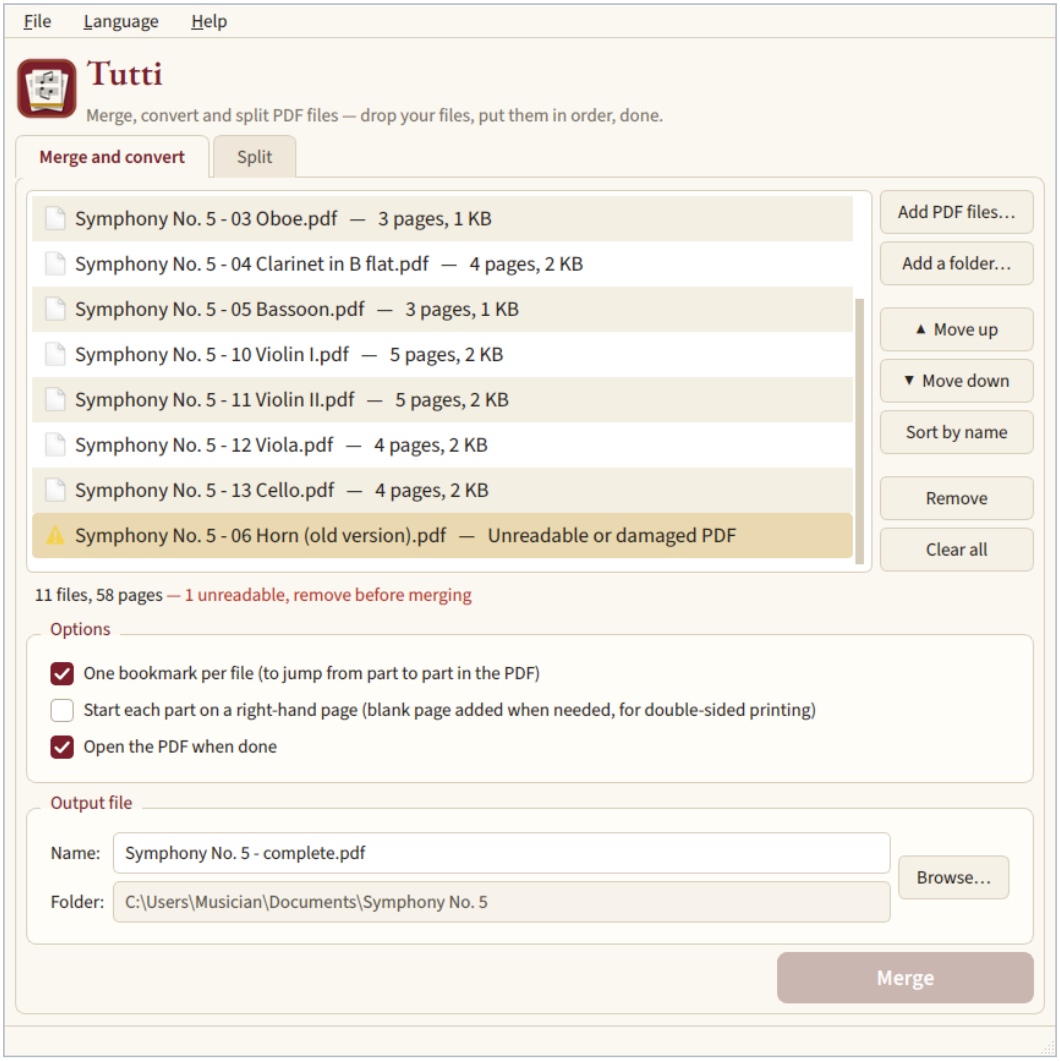

One bookmark per file
The merged PDF contains one bookmark per original file ("02 Flute", "10 Violin I"...), shown in the side panel of your PDF reader. The bookmark is the file name without the part common to all.

Start each part on a right-hand page
For double-sided printing: when a part ends on a right-hand page, a blank page is inserted so that the next part also starts on a right-hand page.

Open the PDF when done
Opens the result in your usual PDF reader. When unchecked, Tutti offers to open the PDF or its folder.

6 When a file causes trouble

A damaged or password-protected file is shown in red in the list, with the reason, **before** merging. The **Merge** button stays greyed out while it is there: select it and click **Remove**.

Message	What to do
Unreadable or damaged PDF	Reopen the original document and export it to PDF again.
Password protected	Save a copy without a password from your PDF reader.
This PDF has no pages	The file is empty: remove it.
The file is probably open in another program	Close the merged PDF in your reader, then try again.

7 Converting images and documents to PDF

In the **Merge and convert** tab, the list also accepts:

Images	JPEG, PNG, TIFF (including multi-page), BMP, GIF, WebP
Word	`.doc`, `.docx`, `.odt`, `.rtf`
Excel	`.xls`, `.xlsx`, `.ods`
PowerPoint	`.ppt`, `.pptx`, `.odp`

Each file is converted as soon as it enters the list; it shows “(image)” or “(converted document)” and its page count. You can then order it and merge it with PDF files like any other file.

To convert a single file, drop it alone into the list: Tutti suggests the same name with the `.pdf` extension (`Letter.docx` → `Letter.pdf`), and **Merge** produces the PDF.

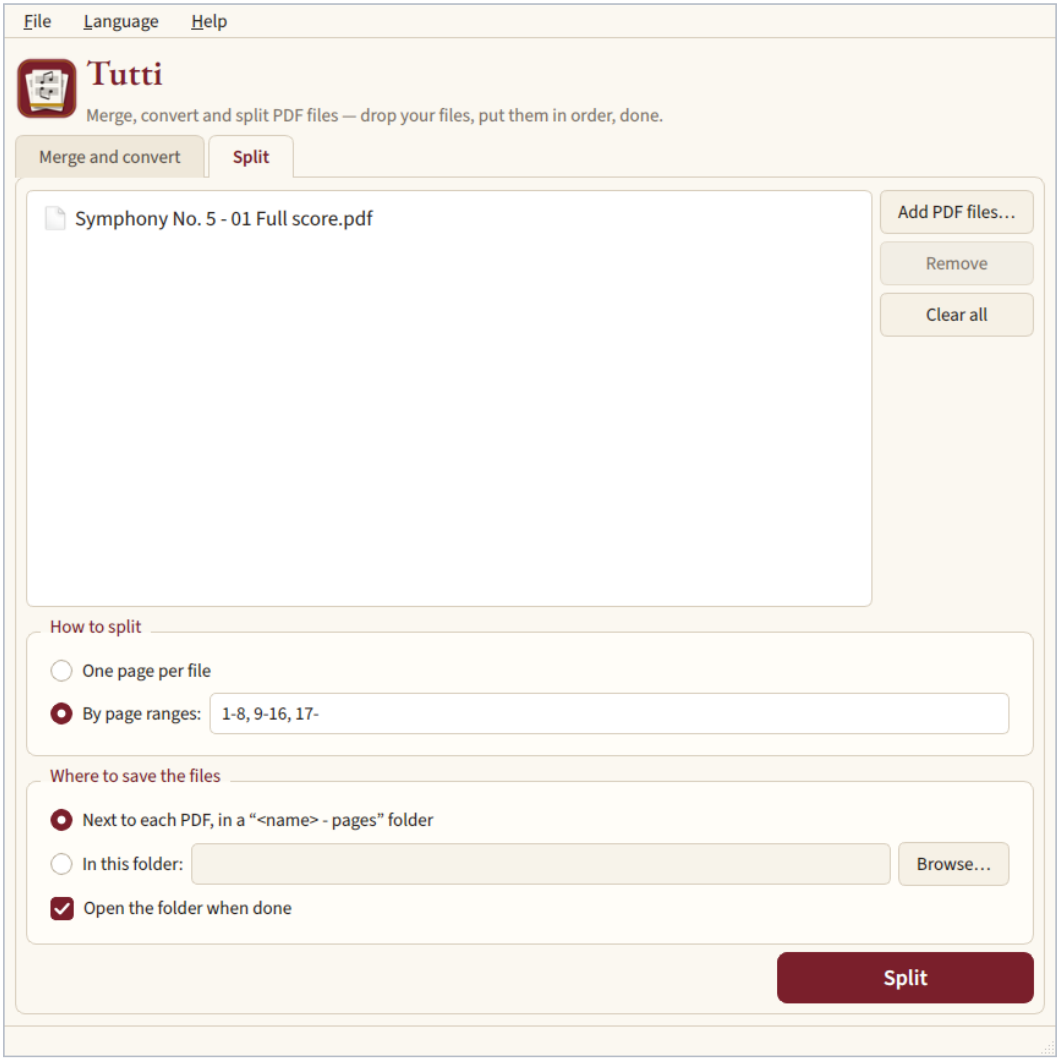

- **Images**: one image per page, on A4 in the image's orientation, without distortion. A JPEG photo is inserted as is: no loss of quality.
- **Word, Excel, PowerPoint**: the layout is done by **Microsoft Office** when it is installed (Windows), otherwise by **LibreOffice** (free, `libreoffice.org`), required on Mac and Linux. It works invisibly, read-only, with macros disabled. If neither is installed, the file is shown in red.

8 Splitting a PDF

Split tab:

1. drop the PDF file(s) to split into the list;
2. choose **One page per file**, or **By page ranges**, typing the ranges separated by commas: `1-8, 9-16, 17-` ("`17-`" means "from page 17 to the end");
3. choose where to save the files: by default, a `<name> - pages` folder is created next to each PDF;
4. click **Split**.

The files are named `Score - page 01.pdf`, `Score - page 02.pdf...` or `Score - pages 01-08.pdf`: the leading zeros keep them in order in Explorer. The original PDF is not modified. If files with the same name already exist, Tutti asks before replacing them.

9 Updates

At startup Tutti quietly checks for a new version. If there is one, it offers to install it: it downloads it, installs it and restarts. Nothing has to be downloaded by hand. You can also check yourself: **Help** → **Check for updates**.

10 Reporting a problem

Help → **Report a problem...**: describe what happened, then **Send**. Without an Internet connection, the report is saved to a file whose location Tutti shows you.

11 Privacy

- Tutti only goes online to check for updates and, with your consent, to send error reports.
- None of your files is ever sent. In reports, file names and the user name are hidden.

12 Keyboard shortcuts

Ctrl+O	Add PDF files
Alt+↑ / Alt+↓	Move the selected file up / down
Del	Remove the selected file from the list
F1	Open this guide
Ctrl+Q	Quit

Tutti uses qpdf (through pikepdf) and the Source Sans 3 and EB Garamond fonts (SIL Open Font License). Examples in this guide use fictitious files.
